

## Product features

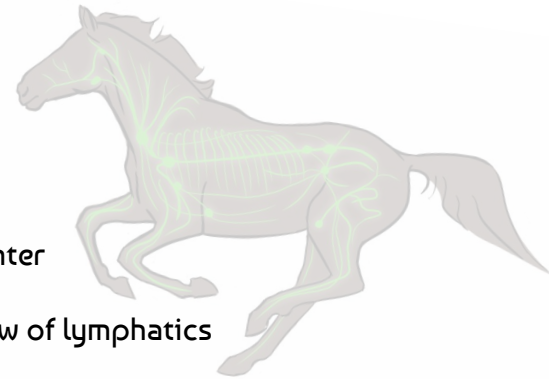

- The **one and only** active compression therapy device for horses
- Developed by **veterinarians** and key opinion leaders in equine orthopedic surgery, sports medicine and rehabilitation, and compression technology
- Designed for professional use in a sterile environment and client use in dusty barn settings or on-the-go
- Multiple technological patents embedded for a state of the art compression and precise pressure control within each chamber
- Highest quality garments produced by the world's leading manufacturer of compression systems

- Precisely collaborated and fully controllable pressures up to 80 mmHg
  - **Full-limb** coverage from **hoof to stifle/elbow** with air chambers that inflate with air applying a massage
  - The **active massage** with directional air flow promotes forward flow and eliminates any backflow
  - Adjustable width with two zippers 2 inches apart "for the hind limb to accommodate for swelling
- Rechargeable pump for most variable user environment from the barn over the pasture to the trailer
  - Strong and durable fabrics that are easy to clean, use and travel with

## EQ Press and The Lymphatic System

- ✓ actively pushes the fluid out of the periphery towards the center
- ✓ actively pushes fluid against gravity following the natural flow of lymphatics
- ✓ creates a pressure gradient to promote forward flow and prevent backflow
- ✓ accelerates the lymph flow and removal of waste and toxins out of the body

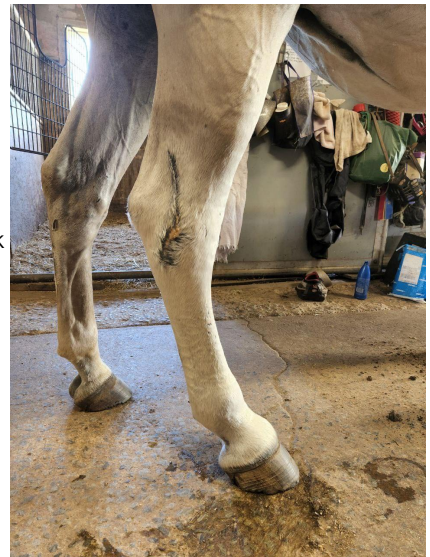

## Benefits for your horse

- Horses lack musculature in the lower limb - making them predisposed to fluid buildup and stocking up. The EQ Press acts like muscles that contract and milk the fluid out of the lower limbs.
- The firm and **gentle compression around the circumference of each limb** actively squeezes out toxins and metabolic waste from the periphery towards the center into the lymph vessels.
- The **sequential inflation of air chambers from the bottom towards the top of the limbs follows the natural flow of the lymphatic system** and helps movement of that fluid up and out of the limb.
- Just **one session** significantly improves swelling and edema
- Just **one session** can speed up recovery and enhance performance
- Regular session can decrease recovery time in horses rehabilitating from a sports injury

Before EQ Press (May '22)

45 min. zweimal daily 4 x week

After EQ Press (Aug '22)

Faster recovery

Highest Quality

Leading Manufacturer

Better performance

Medical Grade Device

One Size Fits All
